

WHY APPSEC360?

ACCELERATE INTAKE WORKFLOW

Appsec360 will reduce time required by product security teams to get visibility to product release cycles and help surface security inputs early for the engineering teams.

CUSTOMIZE & SCALE PROCESSES

Through orchestration of product security workflows like findings management, custom SLA enforcement, etc. Appsec360 will help customize security requirements based on the needs of an organization or team and is primed for scale.

UNIFY PRODUCT SECURITY TOOLS

Appsec360 will act as a connective fabric that runs through previously disparate product security and engineering team's tool chains. It will provide the security team with a central console through which to action all product security activities.

INCREASE SECURITY TEAM PRODUCTIVITY

Security program's management tasks are automated and security team can spend more time improving the security of critical systems and charting future security improvements rather than getting sucked into doing grunt work.

LEVERAGING EXISTING SETUP

By automating repeatable actions and minimizing console-switching, Appsec360's security orchestration enables teams to coordinate among multiple products easily and extract more value out of existing security investments.

IMPROVE OVERALL SECURITY POSTURE

The sum of all above mentioned benefits is an overall improvement of the organization's product security posture, which reduces security and business risk.
